KVM Switches

Who Says You Can't Do Two Things at Once?

Sometimes it's not enough to just have access to one computer at a time. With V7's KVM switch, you have the ability to control two PCs at once using just one keyboard, monitor and mouse. The plug and play functionality of the compact KVM switch means there's no software to load or power adapter required.

- Supports video resolutions up to 1920 x 1440
- Features Auto-Scan and LED display for easy status monitoring.
